EDUCATION

University of Maryland – Cumulative GPA: 3.74/4.0

College Park, MD

Bachelor of Science in Computer Science (Machine Learning Concentration) and Business Minor

Expected Graduation: May 2027

- **Relevant Coursework:** Artificial Intelligence, Machine Learning, Data Science, Applied Statistics, Calculus III, Data Structures, Algorithms, Discrete Mathematics, Linear Algebra, Object-Oriented Programming, Computer Vision
- **Honors & Awards:** Dean's List (2023 – 2025), Alpha Lambda Delta Honors Society, National Society of Collegiate Scholars

EXPERIENCE

Texas Instruments

Dallas, TX

Software Engineer Intern

June 2025 – August 2025

- Engineered a soft bounce email management system to protect the company's email credibility, creating internal soft bounce and suppression SQL databases, and developing Python scripts to make SendGrid API calls to sync multiple databases
- Developed the architecture of the project, collaborating with members of my team and adjacent teams to find the most efficient solution that worked with the existing internal and external components of the email management system

University of Maryland

College Park, MD

Peer Research Mentor

January 2025 – May 2025

- Research mentor for students in the Climate Computing Stream of the First-Year Innovation & Research Experience
- Helped students develop their research skills, including data analysis, data modeling, and creating presentable posters
- Researched in a group of 3 about the relationship between Wave Activity Flux and Arctic weather patterns, and presented our research at UMD's Spring Undergraduate Research Day

FIRE: The First-Year Innovation & Research Experience

College Park, MD

Climate Computing Researcher

August 2023 – December 2024

- Selected to research in the Climate Computing stream of the selective FIRE program at the University of Maryland
- Working in a team of 4 to develop multiple theses and test them by writing Python scripts to run on Derecho, the newest supercomputer developed by the National Center for Atmospheric Research, and conducting deep analysis of simulations
- Present our completed research at the annual FIRE Summit to hundreds of FIRE members, faculty, and UMD students

Perlman Camp

Rockville, MD

Software Engineer Intern

February 2022 – August 2022

- Developed and fine-tuned a dynamic sorting algorithm using Java, ensuring efficient and fair distribution of campers into activities, and collaborated with senior staff to align the program's functionality with camp objectives
- Implemented the dynamic algorithm by utilizing Apache POI commands to read and write previous data to Excel sheets

PROJECTS

Real-Time Option Volatility Surface | *Python, Pandas, NumPy, Black-Scholes Modeling, IV Calculations, Multi-threading*

- Built a real-time financial analytics web application using Python, Streamlit, and Plotly with live data integration from the Yahoo Finance API, featuring interactive 3D option volatility surface and responsive dashboard components
- Implemented Black-Scholes options pricing model with complete Greeks calculation and implied volatility surface construction using the Newton-Raphson method, processing 2,000+ real options contracts for accurate risk assessment

PlanetTerp Teacher Rating Predictor | *Python, Pandas, NLTK, Scikit-learn, Matplotlib, NumPy, Seaborn*

- Created a very accurate learning algorithm for predicting the rating of a professor on PlanetTerp, utilizing multiple models from Scikit-learn and conducting sentiment analysis of a professor's reviews using NLTK's Vader sentiment analysis model
- Combined feature extraction and sentiment analysis of professor reviews to train a Linear Regression, Ridge Regression, and Random Forest model to predict a professor's rating, with the Ridge Regression model producing an R^2 of 0.87

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL, C/C++, JavaScript, OCaml, HTML/CSS

Developer Tools: Git, VS Code, JUnit Testing, JupyterLab, Eclipse, BitBucket, Toad, GitHub, Atlassian Ecosystem

Libraries: Pandas, Scikit-learn, NLTK, NumPy, Matplotlib, SendGrid, Apache POI, Seaborn, Streamlit, Plotly
